- Custom shortcodes.
- Two widget ready locations
- Threaded comments.
- Integrated blog pagination.
- CSS & XHTML valid.
- Cross-browser compatible.
- Delivered with .png source files (.psd files available in the forum)

HOW TO INSTALL THE THEME

Please unzip the '[amantina_unzip_first.zip](#)' file that you received.

The theme is the '[amantina.zip](#)' file inside the folder. In your WordPress administration area, go to '[Appearance - Themes](#)'. In the top there appears a new tab navigation. Click on the '[Install Themes](#)' tab, then click the '[Upload](#)' item in the new menu and browse for the '[amantina.zip](#)' file in your computer and after locating it press the '[Install Now](#)' button and after that '[activate](#)' the new theme.

You can also install this theme the traditional way, by unzipping the '[amantina.zip](#)' file, and upload the theme folder using an ftp client to the '[wp-content/themes](#)' folder of your WordPress installation.

After installing the theme, go to '[Appearance-Themes](#)' in your WordPress administrator area, and click the '[activate](#)' link of the newly installed theme. The theme is now the active one.

THE THEME OPTIONS PANEL

This theme comes with an options panel that allows you to configure some aspects of the theme without touching code. To access the options panel, in your WordPress administration area go to '[Appearance – Amantina Options](#)'. Please take a look at the different options you have there.

CHANGING THE LOGO

You can change the logo from the theme panel, by changing the 'Logo Image Url' with your new logo image url.

You can also switch to text logo from the theme panel. In this case your 'Site Title' and description will replace the logo.

CONFIGURING THE MENU

The theme uses in full the custom menu navigation system introduced in WordPress 3.0. There is one menu location in this theme: the 'Main Menu'.

You need to go to '[Appearance – Menus](#)' in your WordPress admin to start configuring your menu. You first need to create a menu in the right side and then from the left you can select the pages and categories you want to be part of each menu. Don't forget to click 'Save Menu' after you add the

items. *Note that you have to have created your pages and categories first and they will be available in the list to include in the menu.*

In the left you will see the active menu location and you need to assign the new menu to the location using the dropdown selection.

USING THE THUMBNAIL FUNCTION

When you edit a post or a page, in the bottom of the right column you have a new area called Featured Image. Click on the [Set Featured Image](#) link and you will be taken in the image uploader interface, where you can upload or select one of the existing images. Make sure that after you view your image press the '[Use as Featured Image](#)' link. The image will be resized and cropped to fit your thumbnail size. The thumbnail is visible only in the category view. It will not be visible when viewing the full post. You can add the full sized image directly to your post if you want to.

THE FRONT PAGE SLIDER

You can include up to three pages or posts in the slider, by simply creating a custom field in the page/post. The custom field name should be '[slider](#)' and the value should be '[1](#)'. Custom fields area is located in the bottom of the screen when you edit a page/post. If your custom fields section is not visible, in the top right of your screen when you edit a page or post, you have a button named 'Screen Options', please click on it and enable the custom fields section. Note that you should use a different post/page for each slide.

When you include a page/post to the slider, the featured image will be used in the slide. It will be resized automatically. Note that the minimum size of the images must be 570x320px.

Custom Fields

Name	Value
slider	1

Add New Custom Field:

Name	Value
<input type="text" value="-- Select --"/>	<input type="text"/>

Enter new

Add Custom Field

Custom fields can be used to add extra metadata to a post that you can [use in your theme](#).

THE WIDGET AREAS OF THE THEME

This theme has 2 widget ready areas. The **FRONT WIDGET** are the widgets in the front of the website, just below the slider. To have an image like in our demo, you can use a text widget and insert the image code in this form:

```

```

The **LEFT SIDEBAR** is the left bar below the left menu, visible in all pages. You can add widgets to each area by going into 'Appearance – Widgets' in your WordPress administration area and dragging & dropping widgets into each bar. Note that you can add as many widgets as you want to each area.

SETTING UP THE BLOG

You have two options to show the blog in the main navigation. You can create a category called '**Blog**' (or 'News' or whatever you want) and include it in the main menu using the menu system. But if you have different categories you might also want to have a blog that shows all latest posts from all categories.

To do so, in your WordPress admin go to 'Settings – Reading'. There you can select to have a page to show your latest posts and a static page in front. If you select a static page in front make sure you don't include that page in the menu, otherwise it will be highlighted when you are in the home page.

CUSTOM BACKGROUND PANEL

One of the new features introduced is the custom background that enables you to easily change the background color of your website or upload an image as your background.

To do so, in your WordPress admin go to 'Appearance – Background' and there you can easily make the necessary changes.

USING SHORTCODES

Shortcodes are custom styled elements ready for you to use. You can use them in your posts, pages or text widgets. To check out our shortcodes please see here :

http://demo.vivathemes.com/themes/amantina/?page_id=13

Sample usages:

Big buttons: [bluebutton]link text[/bluebutton] html is

[bluebutton]text[/bluebutton]

Small buttons: [smallblue]link text[/smallblue]

Boxes: [download]some text[/download]

Best regards,
