- Full width page template
- Custom shortcodes.
- Three widget ready locations
- Threaded comments.
- Integrated blog pagination.
- Cross-browser compatible.
- Delivered with .png source files (.psd files available in the forum)

wplocker.com

HOW TO INSTALL THE THEME

Please unzip the '[galaxy_unzip_first.zip](#)' file that you received.

The theme is the '[galaxy.zip](#)' file inside the folder. In your WordPress administration area, go to '[Appearance - Themes](#)'. In the top there appears a new tab navigation. Click on the '[Install Themes](#)' tab, then click the '[Upload](#)' item in the new menu and browse for the '[galaxy.zip](#)' file in your computer and after locating it press the '[Install Now](#)' button and after that '[activate](#)' the new theme.

You can also install this theme the traditional way, by unzipping the '[galaxy.zip](#)' file, and upload the theme folder using an ftp client to the '[wp-content/themes](#)' folder of your WordPress installation.

After installing the theme, go to '[Appearance-Themes](#)' in your WordPress administrator area, and click the '[activate](#)' link of the newly installed theme. The theme is now the active one.

THE THEME OPTIONS PANEL

This theme comes with an options panel that allows you to configure some aspects of the theme without touching code. To access the options panel, in your WordPress administration area go to '[Appearance – Galaxy Options](#)'. Please take a look at the different options you have there.

CHANGING THE LOGO

You have to upload your logo image in the Media Manager, and enter the image url in the Logo Image Location field, in the theme panel.

You can also switch to text logo from the theme panel.

wplocker.com

CONFIGURING THE MENU

The theme uses in full the custom menu navigation system introduced in WordPress 3.0. There are two menu locations in this theme: the 'Main Menu' and the 'Footer Menu'.

You need to go to '[Appearance – Menus](#)' in your WordPress admin to start configuring your menu. You first need to create a menu in the right side and then from the left you can select the pages and categories you want to be part of each menu. Don't forget to click 'Save Menu' after you add the items. *Note that you have to have created your pages and categories first and they will be available in the list to include in the menu.*

In the left you will see the active menu location and you need to assign the new menu to the location using the dropdown selection.

To enable dropdown in the menu interface, you have to drag the menu items below another menu item (child item).

If you are still having difficulties you can watch this tutorial

<http://www.vivathemes.com/configuring-the-wordpress-custom-menu/>

USING THE THUMBNAIL FUNCTION

When you edit a post, in the bottom of the right column you have an area called *Featured Image*. Click on the [Set Featured Image](#) link and you will be taken in the image uploader interface, where you can upload or select one of the existing images. Make sure that after you view your image press the [‘Use as Featured Image’](#) link. The image will be resized and cropped to fit your thumbnail size.

THE FRONT PAGE SLIDER

The front page slider is managed from the theme panel. Please go to [‘Appearance – Galaxy Options’](#) to change the effect and speeds.

You can include any page or post in the slider, by simply creating a custom field in the page/post. The custom field name should be [‘slider’](#) and the value should be [‘1’](#). One post/page is one slide, so you have to include as many pages or posts for as many slides as you want. The custom fields area is located in the bottom of the screen when you edit a page/post. If your custom fields section is not visible, in the top right of your screen when you edit a page or post, you have a button named [‘Screen Options’](#), please click on it and enable the custom fields section.

When you include a page/post to the slider, by default the featured image will be used, the slide will link to the page/post, the page/post title will be the slide title and the page/post excerpt will be the slide caption.

If you don’t want the slide to link to the page/post, you can create another custom field named [‘slidelink’](#) and in the value area enter the url to be linked to.

If you would like a different title in the slide, you can create another field named [‘slidetitle’](#) and in the value area enter the title you want.

If you would like to have a different caption, you can create a custom field named [‘slidecaption’](#) and in the value area enter the text you want.

If instead of the image you would like to have a video, create a custom field named 'slidevideo' and in the value area enter the embed code of your video. Note that you must resize the video to 650x330px. You can watch this tutorial showing how to embed videos

<http://www.vivathemes.com/how-to-embed-a-video-in-your-content/>

Note that when you use an image, the image will be automatically resized to 650x330px, so it is suggested that the image you use is at least this size to avoid distortions.

Please check the screenshot below for an overview of the custom fields.

The screenshot shows a 'Custom Fields' management interface with a table of fields. Each field has a 'Name' column and a 'Value' column, with 'Delete' and 'Update' buttons below each entry.

Name	Value
slider	1
slidevideo	<iframe src="http://player.vimeo.com/video/1133145?title=0&byline=0&portrait=0" width="650" height="330" frameborder="0" webkitAllowFullScreen mozallowfullscreen allowFullScreen></iframe>
slidelink	http://www.vivathemes.com
slidetitle	Your title goes here
slidecaption	Your caption goes here

Below the table is an 'Add New Custom Field:' section.

THE PORTFOLIO PAGE

You need to create a category named 'portfolio' and include your portfolio posts there. After that, create a page (you can name it whatever you want) and in the template selection dropdown in the right, select 'Portfolio Page'.

After that, create posts that belong to the 'portfolio' category. Add the full sized image as a featured image of each post. The image will be resized automatically as a thumbnail and the full size will open in the lightbox when clicked.

In the content of each post you can add as many images and text as you want.

The portfolio posts will be automatically excluded from the latest posts in your front page and in the blog page.

THE BLOG PAGE TEMPLATE

All you need to do is create a page, and in the template selection dropdown select the 'Blog Page' template.

Portfolio posts will be automatically excluded from that page.

Alternatively you can include separate categories in the menu if you want multiple categories to show up.

THE LATEST POSTS IN THE FRONT PAGE

The theme will automatically include the latest posts in the front page.

Alternatively you can have a static page in front instead of the latest posts. You need to assign that in your WP admin area, by going to 'Settings-Reading'. You can watch this tutorial for more details

<http://www.vivathemes.com/how-to-set-a-static-page-in-the-front-of-your-site/>

THE WIDGET AREAS OF THE THEME

This theme has three widget ready areas. The **FRONT TOP WIDGETS** are the widgets in the front page below the slider. The **RIGHT SIDEBAR** is the right bar visible in all pages. The **BOTTOM WIDGETS** are the widgets in the black area in the bottom of the website. If you notice the twitter feed widget in our demo, that can be done using the Really Simple Twitter Feed Widget that you can download here <http://wordpress.org/extend/plugins/really-simple-twitter-feed-widget/>

You can add widgets to each area by going into '*Appearance – Widgets*' in your WordPress administration area and dragging & dropping widgets into each bar. Note that you can add as many widgets as you want to each area.

<http://www.vivathemes.com/blog/adding-an-image-in-a-text-widget/>

CUSTOM BACKGROUND PANEL

One of the new features introduced is the custom background that enables you to easily change the background color of your website or upload an image as your background.

To do so, in your WordPress admin go to '*Appearance – Background*' and there you can easily make the necessary changes.

USING SHORTCODES

Shortcodes are custom styled elements ready for you to use. You can use them in your posts, pages or text widgets. To check out our shortcodes please see here :

http://demo.vivathemes.com/themes/galaxy/?page_id=38

Sample usages:

Big buttons: [bluebutton]link text[/bluebutton] html is

[bluebutton]text[/bluebutton]

Small buttons: [smallblue]link text[/smallblue]

Boxes: [download]some text[/download]

Half column: [halfcolumn]some text[/halfcolumn]

One third column: [onethirdcolumn] some text[/onethirdcolumn]

Best regards,

The Viva Themes Team
